

Tutorial - Creating a New Gesture - Step 5

Once you are done creating your gesture, the only thing left to do is to save it. If you want it to be available in Virtual Places, you will need to save it into the gestures subdirectory under the directory where your Virtual Places is installed.

(Something like "C:\Program Files\Virtual Places\Exts\Gestures" is an example of where your directory might be). If you currently have Virtual Places open when you save a gesture, you will have to select your gesture button in Virtual Places (that lil smiley face button to the right of where you type in your text) and press the F5 key to refresh your gesture palette. The gesture should appear in the palette after you do that.

You're done! Congratulations!
